Summary

Information Science Engineering graduate with hands-on software development internship experience at CampusPe. Proficient in Java, Python, React.js, SQL, Git, GitHub, Object-Oriented Programming, and Data Structures & Algorithms. Experienced in developing programming solutions, debugging applications, and collaborating using version control. Built AI-powered and full-stack academic projects with a strong understanding of SDLC and software engineering best practices. Actively seeking Software Engineer, Java Developer, Backend Developer, or Full Stack Developer opportunities.

Core Skills

Soft Skills:	Communication, Problem-Solving, Team Management, Adaptability
Technical Skills:	Java, Python, JavaScript, React.js, HTML5, SQL, MySQL, Git, OOP, Spring Boot, REST APIs, DSA, Data Analysis
Languages:	English, Kannada, Hindi

Experience

Sports Analyst at Hudl India Pvt. Ltd. June 2026 - July 2026

- Sports video analysis and annotation across American football, rugby, and volleyball using Hudl's video analysis platform.
- Accurate identification and tagging of players based on on-screen positioning, jersey numbers, and jersey identifiers to support structured sports data analysis.
- Followed sport-specific guidelines to maintain tagging consistency, event classification accuracy, and video annotation quality.

Software Developer Intern at CampusPe Feb 2026 - May 2026

- Developed more than 20 programming solutions in Java and Python to address assigned technical requirements and coding challenges.
- Practical application of Object-Oriented Programming (OOP) principles and logical problem-solving techniques to create clean, efficient, and maintainable code.
- Hands-on experience with Git and GitHub for version control, repository management, code commits, and collaborative development workflows.
- Code quality and reliability were strengthened through testing, debugging, optimization, and mentor feedback, following software development best practices.

Academic Projects

Financial Crime Prevention using Group-Aware Deep Graph Learning (Major Project)
Designed and developed an AI-based financial fraud detection system to identify suspicious transaction patterns using graph-based deep learning. Performed data preprocessing, feature engineering, and graph construction to improve model performance. Trained and evaluated Graph Neural Network models to analyze relationships between financial entities and detect fraudulent activities. Applied machine learning techniques to enhance fraud detection accuracy while reducing false positives.

Real-Time Chat Application (Mini Project)
Developed a real-time messaging application supporting secure user authentication and instant communication. Designed responsive user interfaces and integrated backend services for seamless message exchange. Implemented database connectivity for efficient storage and retrieval of user and chat data. Utilized Git and GitHub for source code management and version control.

Education

2022 - 2026	Bachelor of Engineering in Information Science at **SJB Institute of Technology**
2020 - 2022	Class 12 Karnataka State Board at **Hoysaleshwara Pre-university College**
2020	Class 10 ICSE Board at **Ananth International School**

Certifications

- Artificial Intelligence & Machine Learning – Great Learning Academy
- Python for Data Science – Alison
- Software Testing – NPTEL Online Certification
- Information Security A–Z: Cyber Security Bootcamp – Udemy

Achievements

- Published multiple software development projects on GitHub demonstrating Java, Python, React.js, SQL, and Git
- Microsoft Azure Fundamentals Practioner
- State Champion in Ball Badminton
- Bangalore South Division Ball Badminton Champion (1×) and Runner-up (2×)
